1. Background

General practice is the main provider of sexual health care in NSW. Fifty-five percent of Australians diagnosed with a sexually transmissible infection (STI) or blood borne virus (BBV) access treatment through general practice while eight percent access treatment through publicly funded sexual health services.¹

The presence of symptoms is one of the main reasons people seek sexual health services. However, the asymptomatic nature of most STIs means that most people are not likely to be tested nor seek testing. To address this, opportunistic STI screening should be a routine part of any medical consultation in general practice.²

The NSW Sexually Transmissible Infections Programs Unit (NSW STIPU), in partnership with the Australian Practice Nurses Association (APNA), the Australasian Society for HIV Medicine (ASHM), Family Planning NSW and the Australasian Sexual Health and HIV Nurses Association (ASHHNA) surveyed primary healthcare nurses on experiences with sexual health care in general practice. These survey responses indicated a high level of interest in sexual health and highlighted the value of developing sexual health competency standards for primary care nurses.
2. Primary health care nursing scope of practice

Primary Health Care nurses can provide screening for asymptomatic STI patients. Nurses are accountable for making professional judgments about when activities beyond their own capacity or scope of practice and for initiating consultations with, or referral to, other members of the health care team.3

Patients who present with:
- Clinical signs of disease or infection (symptoms);
- An issue that is outside the scope of the Primary healthcare Nurse OR
- Have an abnormality detected on a screening test
must be referred to an appropriate practitioner or service.

In the majority of instances the referral will be to a General Practitioner.

The Primary Health Care Nurse should explain the nature of the consultation, the questions that will be asked, and the tests that are likely to be taken to the patient to ensure voluntary and informed consent.

STI testing should form part of a routine health assessment. A nurse who adopts an open attitude and consults in a supportive environment can enhance patient comfort to discuss sexual health. Taking a sexual history is important for assessment and management of STIs, however it should not be a barrier to offering STI testing. Testing can be offered without a full sexual history, with the aim of increasing testing.4

Young people are a priority group for STI testing in primary healthcare. When working with children and young people it is the responsibility of the nurse to be aware of the laws relating to consent to healthcare, particularly for those aged less than 14 years. Australian state and territory laws also vary relating to age of sexual consent and laws relating to child protection.5 In some circumstances, ‘adolescent consensual peer sex’ or the acquisition/diagnosis of a STI or pregnancy does not necessarily indicate risk of significant harm and require reporting to child protection services.6 Prior to commencing STI testing of a young person or child this should be discussed with the primary health care team to define the scope of practice and considerations when offering STI testing.7

3. Follow up for patients diagnosed with a sexually transmissible infection

A Medical Officer must be involved in the management and care planning of all patients diagnosed with an STI; this includes reviewing results, ordering of treatments and developing a follow up plan.

Contact tracing is a key aspect of follow up where the Primary Healthcare nurse can provide information and support for patients. Contact tracing is
important for the management of most STIs as it interrupts ongoing transmission of infections, minimises complications of those infected and prevents re-infection from an untreated partner. It is the responsibility of the diagnosing clinician to facilitate the process of notifying current and past partners; however this may be delegated to the Primary Healthcare nurse by the Medical Officer. Contact tracing may be undertaken by the patient or their health professional. If a patient elects to do their own contact tracing, using an online partner notification service may improve the numbers of contacts who are notified. Online services include:

- www.letthemknow.org.au
- www.thedramadownunder.info/notify (for males with male partners)
- www.bettertoknow.org.au (for Aboriginal youth)

If the patient needs provider contact tracing, refer to the Australasian Contact Tracing Manual or contact your local sexual health centre for information and support.

4. Sexual Health Competency Standards for Primary Health Care Nurses

The Sexual Health Competency Standards for Primary Health Care Nurses have been adapted from the ASHHNA Competency Standards for sexual and reproductive health and HIV nurses (2nd Edition). The competency standards support nursing practice in sexual and reproductive health care, including STI testing within the general practice setting and have been reviewed for appropriateness and acceptability by primary health care nurses who have formed a Sexual Health Special Interest Group.

The Sexual Health Competency Standards for Primary Health Care Nurses should be read in conjunction with:

- Expanding Your Practice: A learning module for nurses in general practice (Australian Medicare Local Alliance)
- The Competency Standards for Nurses in General Practice
- Australasian Sexual Health & HIV Nurses Association Competency Standards for sexual and reproductive health and HIV nurses (2nd Edition).

5. Assessing Competence

The principles for assessing competent practice is to adopt a multifaceted approach that includes:

- Direct observation of practice (peer assessment)
- Self assessment of performance in current role
- Reflecting on practice
- Setting professional goals
- Participation in continuing professional development activities

6. Key Practice Skills

The key practice skills that the sexual health competencies will focus on include:

- Sexual History taking
- Specimen collection
- Information provision
- Contact Tracing
- Advocating sexual health nursing practice

<td>✱</td>
</tr>
<tr>
<td>Identifies and disseminates knowledge to colleagues and other health professionals eg. in-service and case presentations</td>
<td>✱</td>
</tr>
</tbody>
</table>

## Domain 7 – Leadership and Development of the Role

<table>
<thead>
<tr>
<th>Self assessment</th>
<th>Peer assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Applies current evidence based practice to clinical care</td>
<td>✱</td>
</tr>
<tr>
<td>Contributes to the development of nursing knowledge through reflection on practice</td>
<td>✱</td>
</tr>
<tr>
<td>Participates in professional development activities eg. seminar attendance, conference attendance, professional readings and disseminates information to colleagues</td>
<td>✱</td>
</tr>
<tr>
<td>Advocates for the role of the primary healthcare nurse in sexual health within the general practice setting</td>
<td>✱</td>
</tr>
<tr>
<td>Acts as a mentor and/or preceptor for peers undertaking education in sexual healthcare</td>
<td>✱</td>
</tr>
</tbody>
</table>
8. Professional Development

Requires a commitment by the individual nurse and their employer to provide an environment that supports continuous learning and ongoing evaluation. Self assessment or assessment by a Medical Officer against these competency standards contributes to professional development in sexual healthcare for primary healthcare nurses.

The Standards may also be used to:

- Advocate for sexual health care to be included within the role of nurses in primary care
- Provide guidelines of best practice for RNs
- Assist in identifying areas of practice where further training and ongoing professional development are required
- Assist in the documentation of professional development achievements and plans
- Inform employers, such as General Practitioners, of the level of sexual healthcare expertise that primary healthcare nurses can provide to patients attending general practice

Professional development opportunities in sexual healthcare include but are not limited to:

- APNA Online Learning- STI & Blood Borne Viruses
- One Day Sexual Health Nursing Course for Practice Nurses (ASHM)
- FPNSW Well Women’s Screening Course
- FPNSW Sexual & Reproductive Health Course
- The Australian College of Nursing Sexual Health Nursing: Principles & Practice
- The Australian College of Nursing Sexual Health Nursing: Clinical Practice
- ASHM Emerging Issues in Sexual Health Nursing
- ASHM Short Course in HIV Nursing
- ASHM Hepatitis C Nursing Education
- ASHM Hepatitis B Nursing: Advanced Nursing Management and Care
- Women’s Health NSW Training Course
- Edith Cowan University STI e-Learning Module
